Optimizing Olefin Plant Unit Operations

Introduction

The success of every company depends on each employee's understanding of the key business components. Employee training and development will unlock the company's profitability and reliability. When people, processes, and technology work together as a team developing practical solutions, companies can maximize profitability and assets in a sustainable manner. Training and development is an investment in future success - give yourself and your employees the keys to success.

It is strategically important that your team understands the fundamentals of process unit operations concepts. This is the difference between being in the best quartile of operational ability and being in the last quartile. There is vast difference in the operational ability of operating companies and most benchmarking studies have confirmed this gap in operational abilities.

Whether you have a team of new or seasoned employees, an introduction or review of these concepts are very beneficial in closing the gap if you are not in the best quartile, or maintaining a leadership position. Most studies show that a continuous reinforcement of best practices in operational principles is the most effective way to obtain the desired results. Training and learning should be an ongoing, continuous life long goal.

Course Objective

This course will guide the participants to develop key concepts and techniques for optimizing olefin unit operations. These key concepts can be utilized to make operating decisions that can improve your unit’s performance.

Many aspects of Olefin / Ethylene Plant operations management can be improved including, product recoveries, purities and energy utilization, and safety. This cannot be achieved without first an understanding of basic fundamental principles of design and operation. These principles need to be understood in advance of operating and trouble shooting a process unit operation for the manager or problem solving to be effective.

This seminar focuses on the core building blocks of the Olefin / Ethylene Plant process systems, equipment and economics. This program will emphasize the process unit
operation fundamentals, safe utilization of these fundamentals by operations, engineering, maintenance and support personnel.

There are many aspects of operational optimization. Partial list may include:

1. Safety
2. Reliability – Continuity of Operations
3. Quality
4. Cost
5. People Development

1. Safety

Safety is the number one concern. No project or operation can be classified as optimized or best unless it is done safely. The Center for Chemical Plant Safety (CCPS) has conducted benchmarking studies that show a strong culture of safety awareness also has economic benefits as well as the social and humane benefits.

2. Reliability - Continuity of Operations

A stable reliable plant is the largest revenue source. A reliable plant that has high cost will make generate more revenue than a low cost plant that has multiple outages. The on stream factor is a benchmark of reliability. Industry average is 97%, but the top quartile approaches 100%. This three percent increased production is a significant difference in revenue.

3. Quality

Quality has two aspects. The first is the external aspect. To develop and maintain the reputation of producing quality products will allow you to charge a premium during the economic up turns and be able to maintain your key customers in a down turn. The second is the internal aspect. There is an added cost of non quality production. Sometime the product can be reprocessed, with an added energy debit. If the product cannot be reprocessed it will need to be sold with a cost debit.
4. Cost

Cost control is a very important aspect of operational optimization. The two largest costs are feedstock and energy. A very small feedstock reduction can lead to a very large profit improvement. The industry averages three percent energy improvement per year. The top quartile will improve more than 3%.

5. People Development

Most people might rate this higher than fifth. It is a very important aspect of operational excellent, but talent can be acquired for a price. The best plan is to hire talented people, train them well, pay them well, and retain them, but few companies seem to be capable of accomplishing this task. People Development will insure that items one through four are optimized.

Outline

Introduction

- Overview of the Chemical Processing Industry

Review of Process Incidents

- Safety for the Chemical Processing Industry

Fundamentals of Petroleum Chemistry

- Description of a Hydrocarbon Molecule
- Types of Hydrocarbon Molecules
- Definition and Function of a Catalyst

Introduction to Petrochemical Key Concepts

- Unit Operations
- Process Flow Diagrams
- Mass Balance
Introduction to Olefin Plant Equipment

- Distillation
- Absorption
- Heat Exchange
- Reactors
- Pumps
- Compressors
- Furnaces

Overview of an Olefin Unit

- Olefin Unit Flow Sheet
- Comparison of Flow Schemes
- Furnace Overview
- Quench Systems Design and Operation
- Compression Overview
- Separation
- Refrigeration
- Hydrogenation

Ethylene Furnace Technology

- Historical Development
- Design Constraints
- Comparison of Current Designs
- Furnace Run lengths
- Anti Coking
- Future Opportunities
- Ethylene Furnace Trouble Shooting
Ethylene Distillation

- Designing Towers for Fouling Service
- DSD Case Study
- Quench Water Tower Case Study

Process Equipment Troubleshooting

- Troubleshooting concepts and techniques
- Typical Problems
- Interaction of Process and Equipment
- Tower Scan Case Study
- Tower Inspection Case Study

Plant Reliability

- Introduction to Plant Reliability
- Equipment Design for improved Reliability

Quality

- Introduction to Quality
- Overview of Statistical Process Control

Cost Control

- Introduction to Cost Control
- Feedstock
- Energy
- Develop Key Performance Indicators
- Managing Projects

People Development

- People Development
- Team Building
- Training
Who Should Attend:

- People who are making day to day decisions regarding operation, design, and economics of processing plants;
  1. 1st Line Operations personnel,
  2. Operation Supervisors,
  3. 1st Line Maintenance personnel,
  4. Maintenance Supervisors,
  5. Senior Plant Supervisors,
  6. Operations Engineers
  7. Process Support Engineers,
  8. Design Engineers,
  9. Cost Engineers

- Ideal for veterans and those with only a few years of experience who want to review or broaden their understanding in Processing Plant Operations.

- Other professionals who desire a better understanding of subject matter
What you can expect to gain:

- An detailed overview of Olefin Unit operations, processes and economics
- Gain an understanding of the equipment of an Olefin Unit
- Gain an understanding of the Olefin Unit flow sheets
- Gain an understanding of chemistry and catalyst
- Gain an understating of process unit margins
- Troubleshooting Techniques
- Gain an insight to optimization strategies
